

Tech & SaaS — Mini-Diagnostic Template

Structure

Page 1: Cover

[Product/Company Name] — Brand Diagnostic

Prepared by Visiominds · [Date]

"[Product]'s technology solves a real problem. The brand identity, website, and market positioning do not yet communicate the maturity and reliability of the product to potential customers."

Page 2: What We Observed

1. Value proposition is unclear on the website. A first-time visitor cannot determine within 5 seconds what [Product] does, who it is for, and why it is better than alternatives. The headline is feature-focused rather than outcome-focused.
2. Visual identity does not signal maturity. The current logo, colour palette, and typography read as an early-stage project rather than a product that businesses should trust with [relevant use case]. Competitors at the same stage present more polished identities.
3. Website conversion flow is weak. The path from landing page to sign-up or demo request has friction. The CTA is not prominent, the social proof is insufficient, and the page layout does not guide the visitor toward action.
4. Product marketing is inconsistent. Feature announcements, blog posts, and social media each use a different visual approach. This reduces brand recognition and makes the company harder to remember.
5. No clear differentiation story. The product has genuine differentiators, but they are communicated as feature lists rather than as a clear positioning narrative that answers "why us over everything else."

Page 3: The Opportunity

The product has proven its value. The gap is between product capability and market perception. For a tech company, particularly one selling to businesses, brand perception directly affects customer acquisition cost, sales cycle length, willingness to pay, and ability to compete against funded incumbents. The opportunity is to build a brand and positioning system that makes the product's quality immediately legible to the right buyers.

Page 4: What This Could Look Like

Product Positioning — Define the value proposition, competitive differentiation, and target customer with precision

>

Identity System — Logo, typography, colour, and visual language that signal reliability and sophistication

>

Website Redesign — Conversion-focused landing page, product pages, and sign-up flow

>

Product Marketing System — Templates for feature launches, case studies, blog posts, and social content
