VXIII

VXIII, drawn as one line

The wordmark is built from a single medium stroke weight. It is firm enough to hold at the small size of an engraving and light enough to sit quietly beside a fine titanium frame. The strokes run past the cap and base lines and are cut flat, like a crystal face. The V and the X share a width, and the three I's close the word as one group. The letters are never joined and never outlined.

STROKE
11 units on a 100 unit cap height, a medium weight

SPACING
16 units between the V, the X and each I

CUT
All terminals are flat and square to the line

The wordmark on six grounds

The wordmark is used in Lava on light grounds and in Fleur on dark grounds. It takes one colour and never a gradient. Rose and Ambre appear only on packaging as a single accent and never behind the wordmark.

Lava on Fleur, primary

Fleur on Lava

Fleur on Brine

Lava on Titanium

Fleur on Gunmetal

Lava on white, print only

Room, minimum size and the temple mark

CLEAR SPACE
Keep a margin equal to the height of the V on all sides.

USE	MINIMUM WIDTH
Print	18 mm
Screen	72 px
Engraved on titanium	6 mm wide with a 0.3 mm line

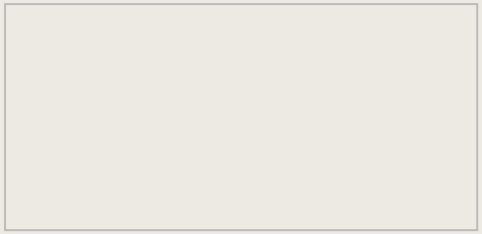

ENGRAVING, INNER FACE OF THE TEMPLE

The mark is engraved once on each temple, on the inside face where only the wearer sees it. The wordmark is cut 0.14 mm deep and the line from the verse sits beside it in capitals with wide spacing. Titanium, shown here as a macro of the inner face.

Salt white carries the page

Fleur carries most surfaces. Lava carries type. The mineral colours are held back so a single accent can speak.

APPLICATION

Layout rules and the first applications

Pages sit on a twelve column grid with generous margins and a single focal point. Photography is a pale ground with one object. Text is flush left and the wordmark appears once per surface.
