MOOD BOARD

STAGE 3 · SEVEN FORMS OF SALT · OCTOBER 2026

VXIII

MOOD BOARD

The board collects the seven forms of salt named in the brand story, with the evidence from the market research beside them. Every shape, detail and colour that reaches the constructions must come from one of these pages.

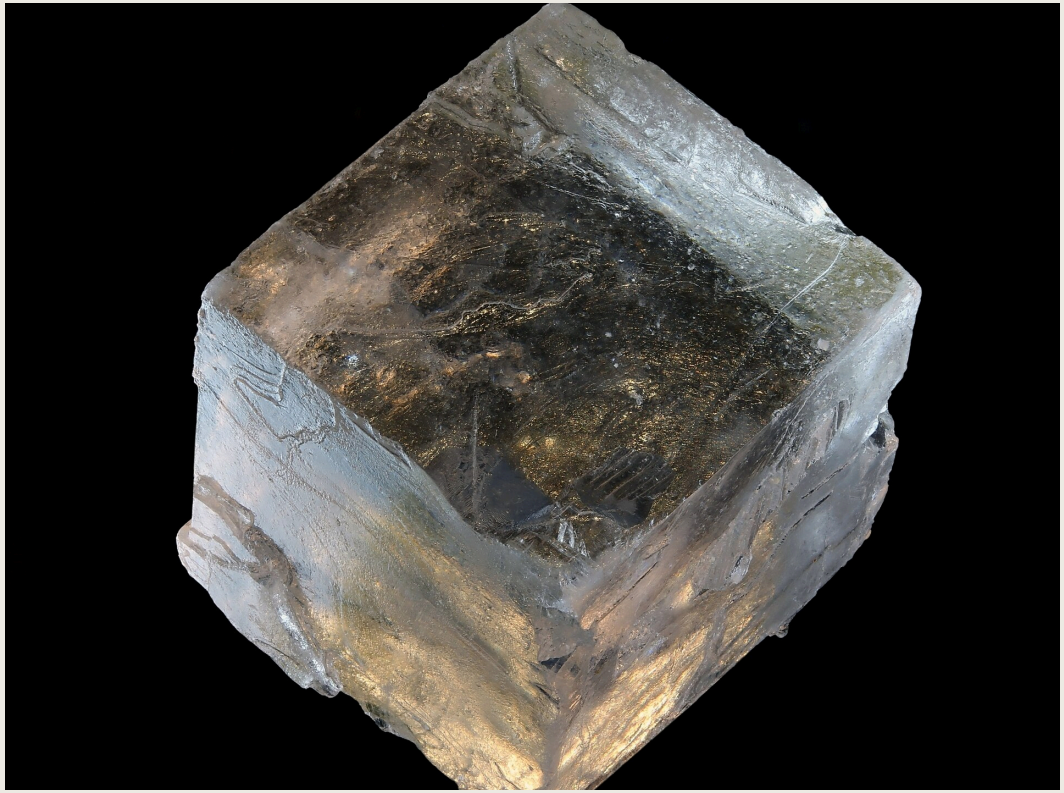

Each page shows the salt form, then what it gives Halite and what it gives Fleur. The last column ties it to a finding in the research, so the board answers to the story and to the buyer at the same time.

Every photograph is freely licensed and credited under its image and again on the last page. No other brand's product appears on the board.

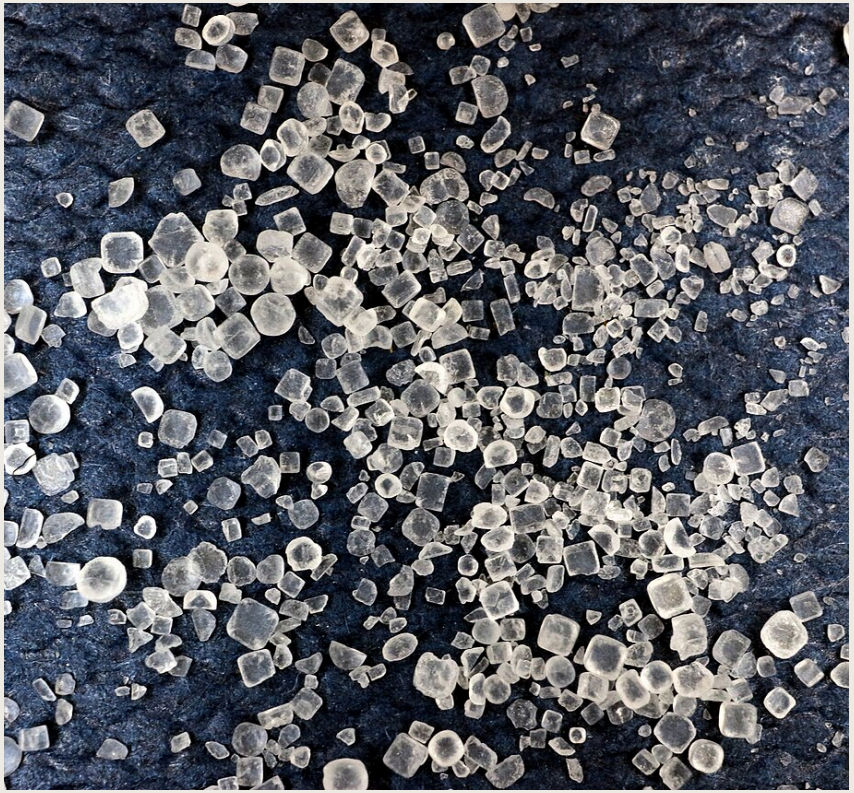

PAGE	SALT FORM	GIVES THE FRAME
01	**The halite cube**	Square proportion and true edges
02	**The hopper crystal**	A stepped detail
03	**The evaporation line**	A double line and a lit edge
04	**The pan and the crust**	Rectangle, level top line and facet
05	**The terrace**	A stepped profile
06	**The clear crystal**	Clear acetate
07	**Colour from salt**	Frame and lens colour

01 THE HALITE CUBE

Rock salt crystallises as a cube and breaks cleanly along right angles. Even the finest grain of table salt is a small cube with true edges.

Halite cube, 20 mm. Hans-Joachim Engelhardt, CC BY-SA 4.0

Salt crystals, macro. Crispin Cooper (Prosthetic Head), CC BY-SA 4.0

FOR HALITE

The base proportion of the men's model. A lens close to square, flat planes and corners that are cut rather than rounded away. Cube end pieces and hinge blocks.

FOR FLEUR

Cube hinge blocks and a squared outer corner, softened for a woman's face.

EVIDENCE

Square is the preferred sunglasses shape for 51% of US adults, the first of all shapes. Vision Council 2023.

02 THE HOPPER CRYSTAL

When salt crystallises fast at the surface of the brine, the edges of the cube grow ahead of the faces. The crystal forms in steps, each square set inside the last. Much of the fleur de sel skimmed from the surface of a pan forms this way.

Hoppered halite cubes, Santa Eulalia. Rob Lavinsky, iRocks.com, CC BY-SA 3.0

Stepped halite cubes, Stassfurt. Rob Lavinsky, iRocks.com, CC BY-SA 3.0

FOR HALITE

A stepped hinge block or temple tip, cut as squares set one inside another.

FOR FLEUR

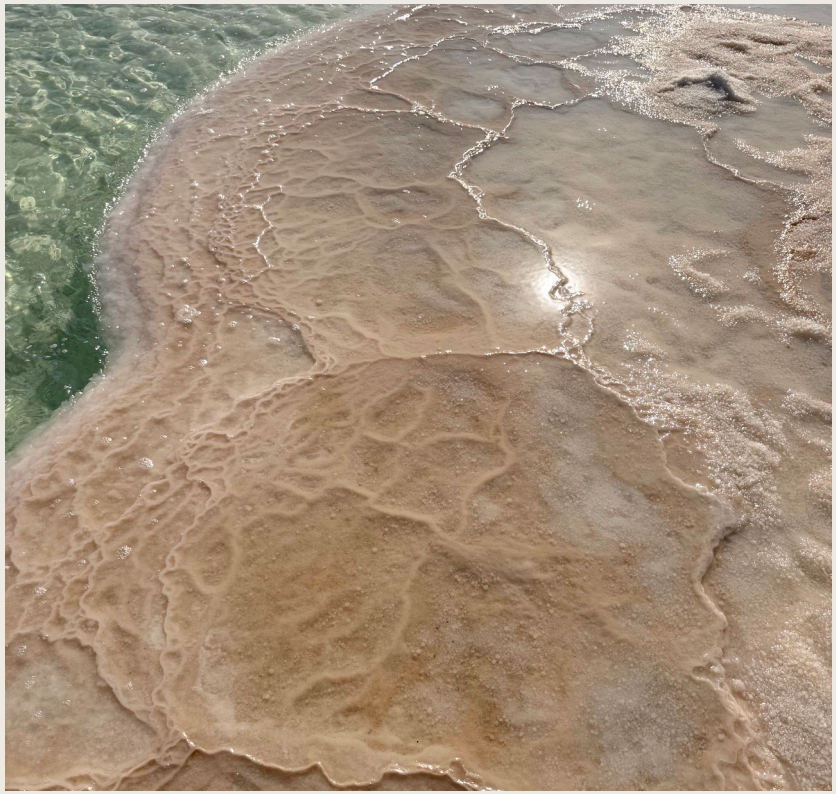

The signature of the women's model, which is named for fleur de sel. A stepped detail at the lifted outer corner of a cat eye, at the hinge and at the temple tip.

EVIDENCE

Cat eye and browline shapes are favoured by women. Vision Council 2024.

03 THE EVAPORATION LINE

As brine dries, it leaves white rings of salt at the edge of the water, one inside the other. Each ring marks where the water stood.

Halite terraces and salt crust, Dead Sea. C26.AI, CC BY 4.0

Salt formations, Dead Sea. Tiia Monto, CC BY-SA 3.0

FOR HALITE

A lens edge bevelled and polished so that it catches light like the white line at the edge of a pan, suited to a rimless frame.

FOR FLEUR

A double rim, two fine lines of titanium around the lens with a small gap between them.

EVIDENCE

Rimless styles appeal more to men. Vision Council 2024. Fine metal lines suit the oversized soft square favoured for women in 2025 and 2026.

04 THE PAN AND THE CRUST

Salt pans are shallow rectangles divided by low walls. When a salt flat dries completely, as on the Salar de Uyuni, the crust cracks into a field of hexagons.

Salt ponds, San Francisco Bay. Daniel L. Lu, CC BY-SA 4.0

Hexagonal crust, Salar de Uyuni. Pedro Szekely, CC BY 2.0

FOR HALITE

A level top line across both lenses, the way water lies flat in a pan. A faceted or octagonal lens taken from the crust.

FOR FLEUR

The crack pattern of the crust, used on the packaging and inside the case.

EVIDENCE

Rectangular frames lead eyewear preference at 77%. Hexagonal and octagonal metal frames are a rising style. Vision Council 2024 and trend coverage.

05 THE TERRACE

At Maras in Peru, several thousand salt pools step down the side of a valley. Each pool sits a little lower than the one above.

Salineras de Maras, Peru. Diego Delso, delso.photo, CC BY-SA 4.0

FOR HALITE

A bridge that steps down from the top line to the nose, in two levels.

FOR FLEUR

A temple that steps once as it leaves the hinge, so the line of the frame descends like the terraces.

EVIDENCE

This form sets a detail, and no shape in the research depends on it. It is a secondary source.

06 THE CLEAR CRYSTAL

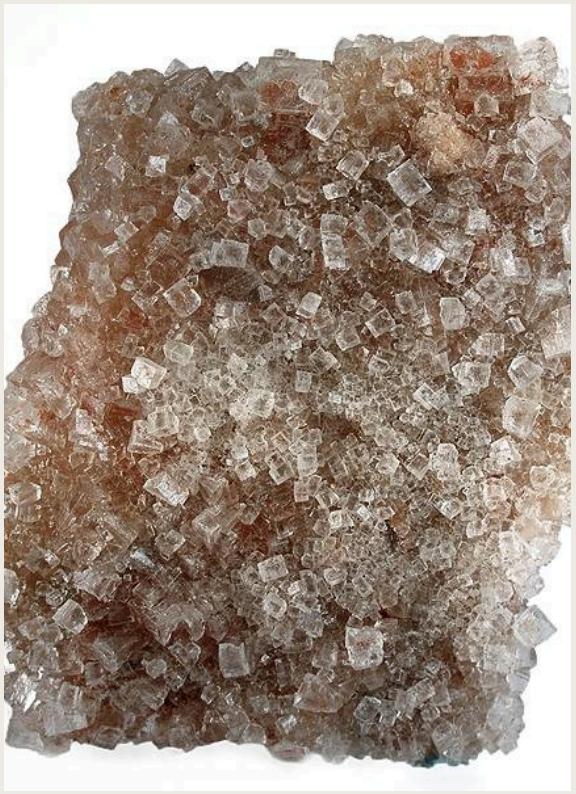

A clean salt crystal is clear, and light passes straight through it. The inner structure of the crystal can be seen from outside.

Rock salt crystal, Vienna. włodi, CC BY-SA 2.0

Clear stepped halite, Wieliczka. Rob Lavinsky, iRocks.com, CC BY-SA 3.0

Clear halite crystals, Searles Lake. Rob Lavinsky, iRocks.com, CC BY-SA 3.0

FOR HALITE

A clear acetate front with the titanium core visible inside, as an option for one concept.

FOR FLEUR

A clear acetate frame with the titanium structure seen through it. The strongest candidate for the third Fleur concept.

EVIDENCE

Clear and tortoise frames have stronger appeal among younger buyers and non-prescription wearers. Vision Council 2024.

07 COLOUR FROM SALT

The research sets which colours sell. Salt supplies every one of them, so each colour in the range is a real salt before it is a product.

Himalayan salt, coarse. Ivar Leidus, CC BY-SA 4.0

Mesquite smoked salt. Bryce Tugwell, CC BY-SA 3.0

Grey salt and fleur de sel. Stéphane Gourichon, CC BY-SA 4.0

Grey salt
#6A6A66
Grey lens. The base lens of the range.

Brine pond green
#4F847D
Green lens for Halite.

Smoked salt
#805337
Tortoise and brown frames.

Red brine pond
#852327
Red-based tortoise for Fleur.

Amber brine pond
#C08837
Amber lens and gold accent.

Himalayan salt
#EBB084
Rose transparent frame and rose gradient lens.

Black lava salt
#151515
Black frame.

Clear crystal
CLEAR
Clear acetate.

EACH CHIP IS SAMPLED FROM THE PHOTOGRAPHS ABOVE, EXCEPT BLACK LAVA SALT. NAMES AND FINAL COLOURWAYS ARE SET IN STAGE 5.

08 COLOUR AGAINST THE RESEARCH

Halite, men

WHAT SELLS	SALT THAT GIVES IT
Black frame, grey lens	Black lava salt and grey salt
Gold frame, green lens	Amber brine pond and brine pond green
Tortoise and brown frames	Smoked salt
Silver and gunmetal frames	Grey salt and the halite cube

BLACK AND GREY LEAD. VISION COUNCIL 2023. TORTOISE, BROWN AND GOLD FROM QUAY BESTSELLERS.

Fleur, women

WHAT SELLS	SALT THAT GIVES IT
Gold frame, brown gradient lens	Amber brine pond and smoked salt
Tortoise frame	Smoked salt and red brine pond
Clear or rose transparent frame	Clear crystal and Himalayan salt
Black frame, grey gradient lens	Black lava salt and grey salt

BROWN GRADIENT, TORTOISE AND TRANSPARENT FRAMES FROM EDITORS' PICKS AND TREND COVERAGE.

The board holds more colours than the range needs. Stage 5 chooses four for each model from this list.

09 MATERIALS

MATERIAL	DESCRIPTION	SALT SOURCE
Titanium	The structure of every frame, including the hinges, bridge, temples and screws. Polished, brushed or coloured by PVD and anodising.	The halite cube, for its true edges
Acetate	Used where a design calls for colour or clarity, in clear, transparent rose and tortoise.	The clear crystal and smoked salt
Lenses	Polarised with UV400 protection. Solid tints for Halite and gradients for Fleur.	Grey salt, brine pond green, smoked salt and Himalayan salt
Engraving	The mark cut inside the temple, in the same metal, with no filler.	The quiet of salt in a meal
Paper, cloth and leather	Uncoated stock, cotton and vegetable tanned leather for the packaging, set in stage 9.	The crust of the salt flat

What the board leaves out. People at work, industrial machinery, museum styling on dark backgrounds, and any product or mark from another brand.
