COLOURWAYS

STAGE 5 · HALITE AND FLEUR, EIGHT FRAMES · OCTOBER 2026

VXIII

COLOURWAYS

Four colourways for Halite and four for Fleur, eight frames in all. The research decided every colour, and a real salt gave every name.

Halite is built on concept H3, the rimless Salt Line, so its colour sits in the titanium mounts, the bridge and the temples, and the lens carries most of the colour on the face. Fleur is built on concept F1, the Hopper cat eye, where the colour runs through the whole wire rim and the stepped end piece.

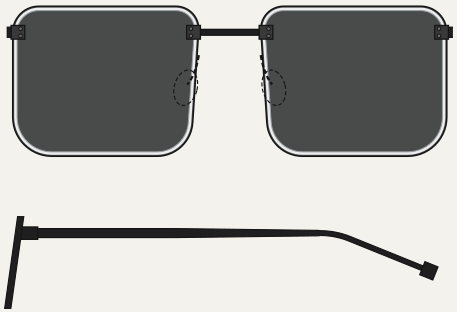

Each colourway pairs one finish with one lens. The name is enough to describe the product.

RULE	HOW IT WAS APPLIED
Required colours	Black with a grey lens for Halite. Gold with a brown gradient lens and a tortoise frame for Fleur. All three are in the range.
Lenses	Every lens is polarised with UV400 protection. Solid lenses for Halite and gradient lenses for Fleur.
Names	Each name is a salt that exists and that carries the colour of the frame or the lens.
Finishes	Colour on titanium by PVD coating. Tortoise appears as acetate sleeves on the temple ends.
Full title	Model, colourway, finish and lens, for example HALITE LAVA, MATTE BLACK TITANIUM, GREY POLARISED LENS.

H3

HALITE, FOUR COLOURWAYS

On the rimless Salt Line, the lens is the largest area of colour, so the four lenses were chosen first: grey, green, brown and a grey mirror, the lenses men buy most. The titanium finish follows each lens.

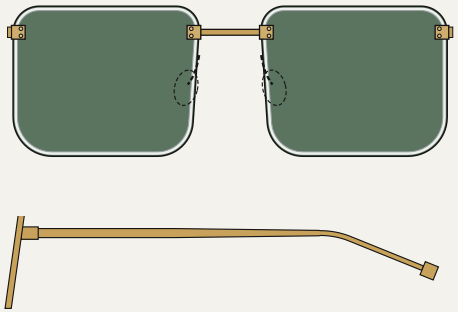

HALITE LAVA

Black lava salt, sea salt blended with activated charcoal.

Matte black titanium
Grey polarised lens

FRAME #1F1F1F LENS #3B3D3E

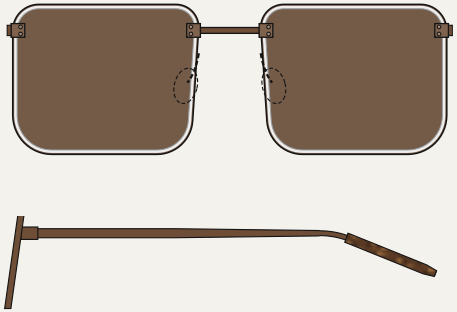

HALITE BRINE

The green of a brine pond, coloured by algae as the water concentrates.

Polished gold titanium
Green polarised lens

FRAME #C8A25A LENS #4E6A55

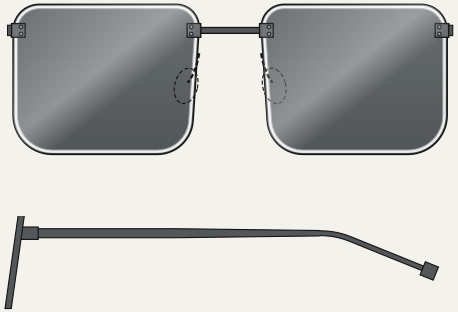

HALITE SMOKE

Smoked salt, sea salt finished over a wood fire until it turns brown.

Brushed bronze titanium with tortoise acetate temple ends
Brown polarised lens

FRAME #6E4E36 LENS #6A4F3B

HALITE UYUNI

The salt crust of the Salar de Uyuni, the largest salt flat on earth.

Brushed gunmetal titanium
Grey polarised with a silver mirror lens

FRAME #53575A LENS #5E6366 TO #43484B

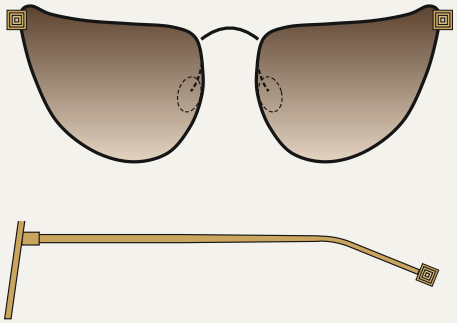

H3 HALITE, SPECIFICATION AND EVIDENCE

COLOURWAY	FINISH	LENS	WHY IT IS IN THE RANGE
Halite Lava	Matte black titanium PVD coating	Grey polarised Category 3, about 12% light transmission	The required black frame with a grey lens. Black leads frame colour and 60% of adults prefer black or grey lenses.
	HALITE LAVA · MATTE BLACK TITANIUM · GREY POLARISED LENS		
Halite Brine	Polished gold titanium PVD coating	Green polarised Category 3, about 15% light transmission	Gold with a green lens is the reference pairing for a metal men's frame. Gold and green both appear in men's bestsellers.
	HALITE BRINE · POLISHED GOLD TITANIUM · GREEN POLARISED LENS		
Halite Smoke	Brushed bronze titanium with tortoise acetate temple ends PVD coating, acetate sleeves	Brown polarised Category 3, about 14% light transmission	Tortoise and brown are the two largest frame colours on the men's bestseller page, and brown is a leading men's lens.
	HALITE SMOKE · BRUSHED BRONZE TITANIUM · BROWN POLARISED LENS		
Halite Uyuni	Brushed gunmetal titanium PVD coating	Grey polarised with a silver mirror Category 3, about 10% light transmission	Gunmetal and silver complete the metal finishes men buy, and mirrored lenses are among the most requested men's options.
	HALITE UYUNI · BRUSHED GUNMETAL TITANIUM · GREY POLARISED WITH A SILVER MIRROR LENS		

F1

FLEUR, FOUR COLOURWAYS

On the Hopper cat eye, the titanium wire carries the colour round the whole lens and into the stepped end piece. Every Fleur lens is a gradient, dark at the top and light at the bottom.

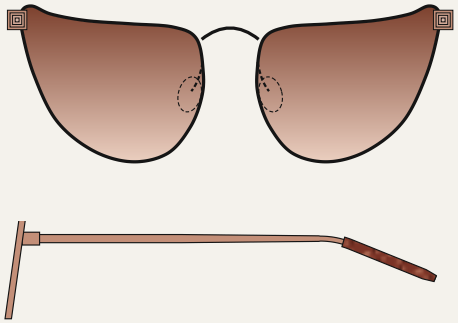

FLEUR GUÉRANDE

Fleur de sel from Guérande in France, skimmed from the pans by hand in the late afternoon.

Polished gold titanium
Brown gradient polarised lens

FRAME #C9A55E

LENS #5E4532 TO #E3D4C1

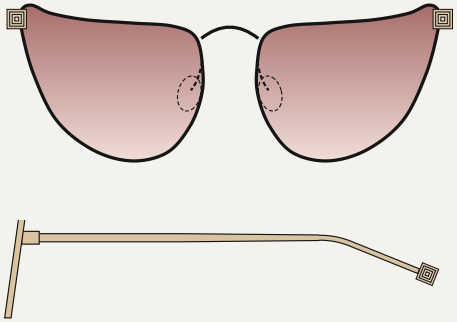

FLEUR ALAEA

Alaea salt from Hawaii, sea salt mixed with red volcanic clay.

Rose gold titanium with red tortoise acetate temple ends
Copper gradient polarised lens

FRAME #C38F78

LENS #7E4330 TO #EBCFC0

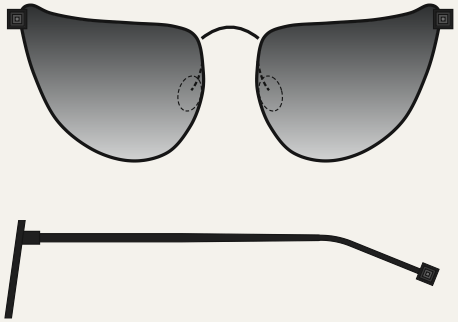

FLEUR RETBA

The salt of Lake Retba in Senegal, where algae turn the water pink.

Champagne titanium
Rose gradient polarised lens

FRAME #D9C3A1

LENS #A86F6C TO #F1DDD8

FLEUR KALA

Kala namak, the black salt of South Asia, fired in a kiln until the rock turns dark.

Matte black titanium
Grey gradient polarised lens

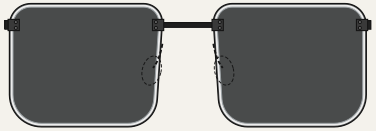

FRAME #1F1F1F

LENS #2F3132 TO #D2D3D3

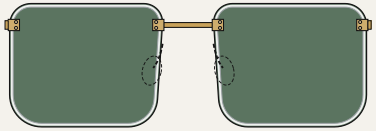

F1 FLEUR, SPECIFICATION AND EVIDENCE

COLOURWAY	FINISH	LENS	WHY IT IS IN THE RANGE
Fleur Guérande	Polished gold titanium PVD coating	Brown gradient polarised Category 2 to 3, dark at the top	The required gold frame with a brown gradient lens. Brown gradient is the first lens in women's editors' picks.
	FLEUR GUÉRANDE · POLISHED GOLD TITANIUM · BROWN GRADIENT POLARISED LENS		
Fleur Alaea	Rose gold titanium with red tortoise acetate temple ends PVD coating, acetate sleeves	Copper gradient polarised Category 2 to 3, dark at the top	The required tortoise frame. Red-based tortoise and copper gradients are the newer women's colours in 2025 coverage.
	FLEUR ALAEA · ROSE GOLD TITANIUM · COPPER GRADIENT POLARISED LENS		
Fleur Retba	Champagne titanium PVD coating	Rose gradient polarised Category 2, dark at the top	Rose and soft pink tones continue to sell for women, and the rose gradient is a named women's lens.
	FLEUR RETBA · CHAMPAGNE TITANIUM · ROSE GRADIENT POLARISED LENS		
Fleur Kala	Matte black titanium PVD coating	Grey gradient polarised Category 2 to 3, dark at the top	Black leads frame colour overall, and grey gradient is the second women's lens after brown.
	FLEUR KALA · MATTE BLACK TITANIUM · GREY GRADIENT POLARISED LENS		

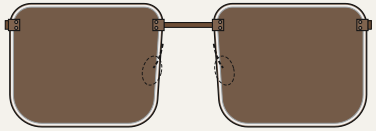

THE RANGE OF EIGHT

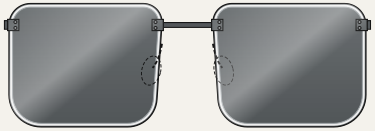

HALITE LAVA

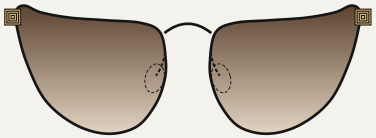

HALITE BRINE

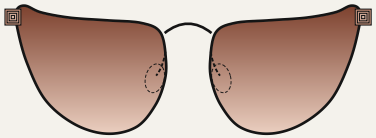

HALITE SMOKE

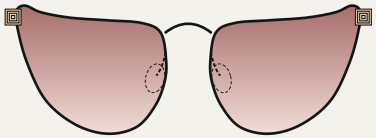

HALITE UYUNI

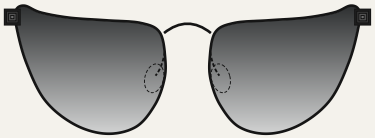

FLEUR GUÉRANDE

FLEUR ALAEA

FLEUR RETBA

FLEUR KALA

Two constructions change for two colourways. Halite Smoke and Fleur Alaea finish their temples in acetate sleeves to carry the tortoise, in place of the titanium cube tip on Halite and the stepped titanium tip on Fleur. The stepped square is kept on Fleur Alaea by engraving it into the end of the sleeve. I need your approval for this before the specification is drawn.
